

THE LATE MINOAN IIIB:1 SETTLEMENT

STRATIGRAPHY AND CATALOGUES

COURTYARD

COURTYARD (*Figs. 61-70, Pls. 20a:31, 35, 37, 39, 40, 20b:19-20, 25, 60-71a*)

At some time no later than the beginning of LM IIIA:2 we find the start of a “fenced” courtyard outside the southwestern facade of Building 2 (*Fig. 1*). It was, throughout the LM IIIA:2/IIIB:1 period, divided into two parts by the retaining wall, 19-Wall 20. The part southeast of 19-Wall 20 was continuously at a horizontal, higher level than the northwestern part which sloped down towards 19-Wall 20 (*Figs. 62-63*). The difference of level between the two parts became lesser through the periods and in the LM IIIB:2 settlement the fence-walls became disused and the former courtyard was by then an open area at a horizontal level (*GSE III, 86-104*). In the LM IIIA:2/IIIB:1 periods there were four major phases with architectural changes. The oldest belonged to the LM IIIA:2 settlement (see below, pp. 238-241 and *Fig. 87*) while three phases have been ascribed to the LM IIIB:1 settlement (*Figs. 61-63, 68-70*). Above and cut into the latest floors of the Courtyard were several deposits and large pits which must belong to the closing years of the LM IIIB:1 settlement. The stratigraphic and architectural sequences of the floors of the Courtyard are divided into three areas: the southeastern floors (i.e. the floors at a high level east of 19-Wall 20), the northwestern floors (i.e. the floors northwest of 19-Wall 20) and the south floors (i.e. floors which belonged to the southern part of the Courtyard) and which were rarely directly connected to the southeastern floors (*Fig. 61*).

YOUNGER DEPOSITS (*Fig. 64*)

Within the walls of the Courtyard six deposits were found which, stratigraphically, were situated below the LM IIIB:2 layers and above the pits and deposits found on the latest floors. These deposits were not homogeneous and are therefore presented separately.

Deposit 1

Deposit 1, which partly covered 19-Pit P (cf. below, p. 139), is situated within the square 533-533.7/706-707.2 and was excavated at levels 10.22 to 10.19. It consisted of a rather hard red

soil. The pottery was mainly LM IIIB with few earlier pieces. 0.315 kg of pottery was collected: 8% decorated, 100% kept and 8.7% inventoried. Shapes were not counted.

POTTERY

82-P 1671, *Pl. 174g:1*

Bowl, rim frg. Clay: LW. Slightly marked rim. Int. RB. Ext. RB and a Minoan flower. Th. 0.004. LM IIIB:1.

82-P 1672, *Pl. 174g:2*

Closed vessel, body frg. Clay: buff and light red, hard, fine. Ext. three narrow body bands between two broader. Th. 0.003-4. Myc IMP. LH IIIA:2/B:1.

Deposit 2

Deposit 2, partly covering 19-Pit Q (cf. below p. 144), is situated in the triangle between 19-Wall 11 and 19-Wall 9 and was excavated at levels 10.16 to 10.05. It consisted of a rather hard red soil. The pottery was mainly LM IIIB and LM IIIA with few earlier pieces. 3.515 kg of pottery were collected: 17% decorated, 87% kept and 3.2% inventoried. Shapes were not counted.

BONES

Few bones from adult *Ovis* and *Capra* and young *Sus*.

Deposit 4

Deposit 4 was lying in the area 0.5 north of 20-Wall 9 and was excavated at levels 10.16 to 10.09, and it is probably part of Deposit 3 with its yellow-brown hard soil with few spots of red. The pottery was mainly LM IIIA with few earlier pieces. 0.515 kg of pottery was collected: 8% decorated, 87% kept and 2.7% inventoried. No shapes to be counted.

POTTERY

84-P 1242, *Pl. 174h:9*

Jug, beak-spouted, handle frg. Clay: light reddish-brown. Part of a strap, vertical handle. Ext. monochrome? Handle 0.008 × 0.021. LM IIIA:2/B:1.

Deposit 5

Deposit 5 is lying in the area 0.25 south of 20-Wall 9 and was excavated at levels 10.19 to 10.11. The soil was slightly different from Deposit 4, being red and hard with pieces of charcoal and spots of ash. Only undecorated LM III pottery. 0.215 kg of pottery was collected: 0% decorated, 67% kept and 0% inventoried. No shapes to be counted.

Deposit 6

Deposit 6 is found east of W1-033 in 534-534.5/700-702.5 at levels 10.21 to 10.14 (north) and 10.06 (south). The deposit was covering 20-Pit AG (*Fig. 65*)(cf. below). The soil is somewhat soft, yellowish-brown and a little sandy towards the south. The pottery was of early LM IIIB and LM IIIA date with few earlier pieces. 5.045 kg of pottery were collected: 16% decorated, 94% kept and 1.4% inventoried. Shapes counted: 2 conical cups, 3 footed cups.

POTTERY

Comments: Notably few small finds and bones were noted in these deposits.

19-Pit G (*Figs. 65, 66E-E, Pl. 60a*)

19-Pit G is situated within the square 532-534.5/704.4-705.8, recognized at levels c. 10.10 to 9.95 (19-Wall 8a) and c. 9.85 (north of 19-Wall 8a). The pit was found below Turkish Hearth 1 (*GSE I*, 113) and above 19-Wall 8a, and it had cut through the floors of the Courtyard. The soil in the pit is loose, light red-brown with stones and pebbles noted in the lower part. The pottery was mainly LM IIIB and LM IIIA with few LM I/MM III. 4.100 kg of pottery were collected: 9% decorated, 90% kept and 3.1% inventoried. Shapes were not counted.

Comments: This is a relatively small pit without bones and other small finds. The joins seem to be “natural”.

19-Pit M (Figs. 65, 66B-B)

This is a small, shallow pit found in the triangle between 19-Wall 5 and the Turkish Well 2 in 532.8-533.5/708-709.5 at levels 10.27 to 10.09. A small part of the pit was covered by the LM IIIB:2 floor of the Courtyard (19-Floor 7), but it is uncertain whether it cut the upper LM IIIB:1 floor (19-Floor 12). The soil was loose, greyish-brown with a lot of pottery which was mainly LM IIIB and LM IIIA and with a few pieces of LM I. 6.260 kg of pottery were collected: 31% decorated, 94% kept and 2.7% inventoried. Shapes were not counted.

Comments: No bones nor small finds were noted except for a few shells.

19-Pit P (Figs. 65, 66C-C, Pl. 60b-c)

The pit is lying within the square 531.8-533.45/705.6-708 and is, in the northern part, cut by the Turkish Well 2 (*GSE I*, 115-116). It was found at levels 10.17 (same as 19-Floor 12) with the bottom at c. 9.61. It was partly overlaid by the LM IIIB:2 floors of the Courtyard and Deposit 1 (above), and it had cut through the floor levels of the LM IIIA:2/IIIB:1 period. In the western part it seemed partly to have overlaid 19-Pit Q. The soil in the pit is light greyish-brown with many stones and pebbles. The pottery was mainly LM IIIB:1 with some LM IIIA, few LM I/MM III and a single EM sherd. 45.995 kg of pottery were collected: 9% decorated, 93% kept and 3.0% inventoried. Shapes were not counted.

SMALL FINDS

82-FR 007, *Pl. 246d:1* [370]

Painted plaster, three frags. Medium hard, slightly gritted plaster with traces of burning. Monochrome, red surface. Mpd 0.018. Th. 0.008. LM I.

82-MISC 016, *Pl. 246d:2* (see below, Shells) [371]82-MISC 019, *Pl. 246d:3* (see below, Shells) [372]

BONES

Few bones from adult *Ovis/Capra*, young *Sus* and *Dama* and from adult *Cervus*. The stag was a large one: part of *Os frontale (sin?)* with basal part of a horn. The horn has a sawn surface and it is also split.

SHELLS

1 *Patella* – open centre, L 0.021. 1 *Conus* – small, L 0.020. 1 *Charonia* – body frag., mouth interior. 1 *Cypraea spurca* – W 0.018. 7 *Glycymeris* – 2 water-worn, one holed below umbo (hole now broken); possibly ground down at umbo and holed, broken distal, large (82-MISC 019); 5 water-worn, 1 broken. 2 *Spondylus* – lower, frag., acidified (82-MISC 016); upper, umbonal frag., small/medium. 1 *Arca* frag. (82-MISC 019). 1 *Cerastoderma* – water-worn, holed umbo.

Comments: There were surprisingly few small finds and bones in such a large pit, but a collection of eight different types of shells is noteworthy. It is one of the few contexts without obsidian. 56% of the inventoried pottery consist of vessels connected to liquids. The many joins to 19-Pit Q connect the two pits.

19-Pit Q (*Figs. 65, 66C-C, Pls. 60c, 61a-b*)

Pit Q is situated within the lower part of the Courtyard within the square 530-532/706-708.3 at levels 10.05 to 9.69 (west) and 9.38 (east). In the western part it was covered by Deposit 2 and to the north it was cut by Turkish Well 2, while the pit itself was cutting through all the LM IIIA:2/B:1 floors of the Courtyard. It is considered as one pit, although two slightly different soils were noted. One is described as dark red, very loose with a lot of stones and pebbles, while the other soil was of the same texture, but more green. Towards the bottom of the pit in the southern part some thin layers were excavated as floors while they were most likely actually part of the pit, since the pottery found in these “floors” corresponded to that of the pit (which continued below) and not to that of the corresponding canonic floors. Besides, there were several joins between the pit and its bottom layer. All baskets contained mainly late LM IIIA and early LM IIIB pottery, while few sherds from earlier periods were also noted. 151.000 kg of pottery were collected: 11% decorated, 92% kept and 2.4% inventoried. Shapes were not counted.

Comments: There are very few bones, shells and small finds in this large pit. However, two restored vessels were lying in it: a large coarse bowl 82-P 0725 (*Fig. 65A, Pl. 61a*) and a decorated footed cup, 82-P 0961+ (*Pls. 93, 177f:2*).

19-Wall 8 (*Figs. 65, 66E-E, Pls. 20a:36, 61c*)

19-Wall 8a/Wall 8b is a curious construction; the purpose and date of which is not certain. The wall is cutting through several of the lower floor levels of the Courtyard, but nowhere is it (at least in the eastern part) overlain by Minoan floors. The wall was, however, found immediately below the Turkish hearth supposed to be a reused LM III floor (cf. *GSE* I, 113) and LM IIIB:1 19-Pit G while it was resting upon LM II/IIIA:1 deposits. It could be followed in a length of 2.5 and had a width of 0.60-0.65. The eastern part is situated within the square 531-534.5/704.6-705.5 running roughly east-west. The levels of the wall are from 9.98 to 9.60/9.66 thus being preserved at a height of a little more than 0.3. Partly over the eastern part of 19-Wall 8a and immediately south of it were six stones in total which may or may not be from a different construction and which are called 19-Wall 8b at levels 10.11 to 9.84. It was constructed with a light brown, loose soil with traces of fire (from the Turkish hearth?). LM III and LM I pottery was noted (0.395 kg; 84-P 1956 inventoried). 19-Wall 8a consisted mainly of unworked stones set in a loose, grey-brown soil with traces of fire (roots from a tree had penetrated among the stones of the wall). Very few sherds were collected from this wall. The pottery appeared in general to be LM I and LM III. 2.375 kg of pottery were collected: 3% decorated, 89% kept and 2.9% inventoried. Shapes counted: 5 conical cups.

Comments: One possible interpretation of the wall is that it might have functioned as a small retaining or dividing wall between the southeastern floors and the south floors as did 19-Wall 20 between the southeastern floors and the north-western floors.

20-Pit P (*Figs. 65, 66D-D, Pls. 61c, 66d*)

This pit which partly destroyed 19-Wall 9 and which is cut into Related III is situated within the square 530.2-531.05/704.3-705 at levels 9.96 to 9.47. This means that the top of the pit was approximately at the level of the second set of floors in the southern part, floors which did not go up to the pit however. The soil is dark brown and soft with bits of charcoal and stones. The datable pottery was LM IIIB:1, LM IIIA and few earlier pieces. 0.577 kg of pottery was collected: 11% decorated, 82% kept and 7.3% inventoried. No shapes to be counted.

Comments: There are very few finds in this 0.5 deep pit.

19-Pit K2 (*Fig. 65, Pl. 62a*)

This pit is situated within the triangle 529-530/705-706 and it is stratified below the LM IIIC 19-Pit K (*GSE II*, 96-97) and

an LM IIIB:2 deposit (*GSE III*, fig. 25a-b [B-B]). It was partly overlying, partly cut through an LM IIIB:1 floor (12-Floor 5 east part, *Fig. 69*) and the pit was excavated at levels from 10.00 to 9.80. The soil was noted to be different from the overlying LM IIIC 19-Pit K which was brown, rather loose with pebbles, but it was not closely described in the notebooks. The pit contained mainly LM IIIB pottery, some LM IIIA and few LM I, MM and EM pieces. 7.420 kg of pottery were collected: 11% decorated, 87% kept and 2.6% inventoried. Shapes were not counted.

20-Pit AG (*Fig. 65, Pl. 20a:46 top*)

This pit is lying in the very southeastern corner east of the Venetian wall W1-033 (*Fig. 55*) above the level of one of the Courtyard floors (20-Floor 23 of Courtyard south, Phase 2) in the area 533.85-534.5/699.4-702.45 at levels 10.10 to 9.94. The soil is yellow-reddish-brown, a little dark, very fine, soft, sandy and with many stones. The pottery appeared to be mainly LM IIIA, but also with some LM IIIB. 7.990 kg of pottery were collected: 9% decorated, 83% kept and 1.4% inventoried. Shapes counted: 7 conical cups, 3 footed cups.

RELATED (*Figs. 65, 66A-A*)

In the northwestern part of the Courtyard there were two small deposits cut by LM IIIB:2 11-Pit F (cf. *GSE III*, 92, fig. 23a) in which no floors were noted and which were excavated at levels above the floors of the Courtyard to levels below the levels of the floors. The two deposits thus belong stratigraphically together with the pits. They are named Related I and Related II. Southwest of 19-Wall 9 were another two small deposits related to the latest use of the Courtyard area. They are named Related III and IV.

Related I (*Figs. 65, 66A-A*)

The deposit is situated roughly within the square 528-529.2/711.4-712.2 at levels 10.17 to below 9.79. The soil is reddish and rather hard. The pottery was mainly LM IIIA with a few LM IIIB and earlier pieces. 3.300 kg of pottery were collected: 21% decorated, 42% kept and 0.8% inventoried. Shapes were not counted.

DEPOSITS ABOVE LATEST FLOORS (*Fig. 67*)

None of these deposits can, with certainty, be said to be real floor deposits. They consist of slightly different soils, some may be real floor deposits while others may perhaps be soil from elsewhere thrown upon the floor. The area of the Courtyard has

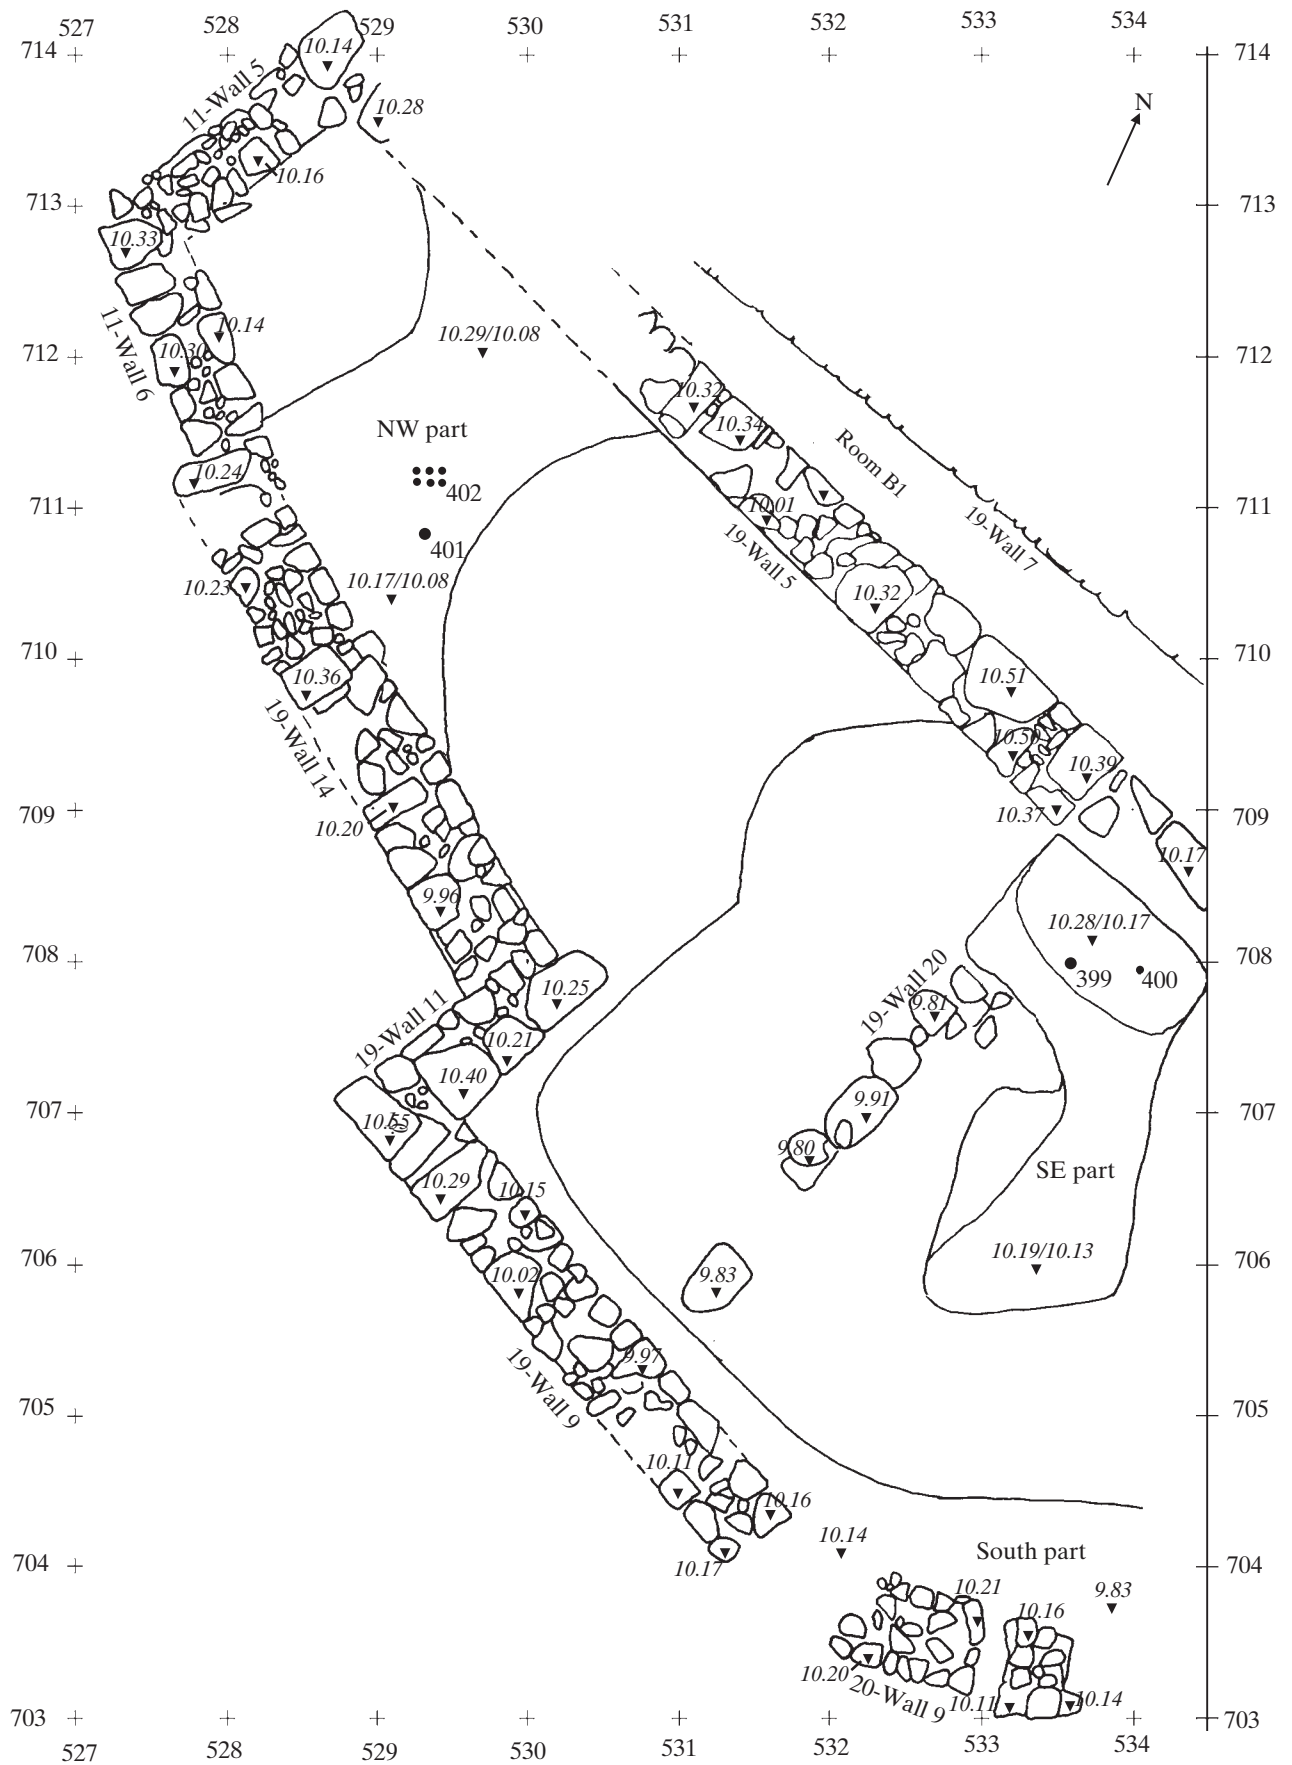

Fig. 67. LM IIIB:1 Courtyard, plan of deposits above latest floors and distribution of finds.

been divided into three parts: *SE*: which is the triangle south of the doorway to Building 2 and east of 19-Wall 20; *NW*: which is the sloping part northwest of 19-wall 20, and *South* which is the lower part opening towards the Rubbish Area Southeast.

Deposits above southeast part

The deposits here were covering almost all parts of the upper floor (19-Floor 12) while one deposit also partly covered 19-Pit P. The bottom of the deposits was the floor which sloped slightly from north at 10.17 to south at 10.13. The top of the deposits was discovered at 10.19 and 10.21 in the southern part and 10.28 in the northern part. The soils were grey-brownish, hard with stones and pebbles in the southern part, while it was red and hard in the northern part and red below the LM IIIB:2 wall (19-Wall 6, cf. *GSE III*, 90-91, fig. 23a). The deposits contained mainly LM IIIB:1 with a few earlier pieces. 7.499 kg of pottery were collected: 10% decorated, 95% kept and 3.7% inventoried. Shapes counted (1984): 1 tripod cooking pot leg.

Deposits above northwest part

It consisted of nine smaller deposits covering the area northwest of the LM IIIB:2 19-Pit H (*GSE III*, p. 97-100) within the area 528.2-530.8/709.3-713.1. The bottom was all over the youngest floor (19-Floor 9) which was found at c. 10.08. The tops of the deposits were at 10.17 and 10.29. The soil(s) were light brown to red, rather hard with bones and some pebbles, while one area was red, dry and medium hard. The pottery had LM IIIB:1 as its latest date but contained also a few earlier pieces. 5.755 kg of pottery were collected: 6% decorated, 74% kept and 2.4% inventoried. Shapes were not counted.

Deposits above south part

In the southern part we had six small deposits within the area 531-534.5/701.6-704.3 which only covered a small portion of the floor area including the very southwestern part.

The deposits were seen to be above different floors but they all started at levels between 10.14 and 10.09. The soils were yellow-brown to light reddish, sandy, in patches hard-packed, while in the southeastern part it was a little more reddish and loose. The pottery contained LM IIIB, with some LM IIIA and a few earlier pieces. 5.425 kg of pottery were collected: 16% decorated, 95% kept and 3.6% inventoried. Shapes counted: 6 conical cups, 1 tripod cooking pot leg, 1 undecorated goblet and 4 footed cups.

Comments: There are extremely few finds in these deposits above the latest floors of the Courtyard.

3RD PHASE (Figs. 62, 63a-b, 68, Pls. 62b-63b)

Phase 3 of the Courtyard had several floor layers. Not much pottery collected at any time, and in the catalogues we have made no attempt to separate the few inventoried sherds, which belong to a short period of time anyhow.

Southeast floors

The SE floors consisted of two layers: 19-Floor 12 and 19-Floor 34. 19-Floor 12 was a beaten earth floor at levels 10.17/10.14 to 10.16/10.13. It was hard-packed with almost no pebbles or sherds embedded. The soil was red to light brown with bits of charcoal and spots of darkened soil. Might have been exposed to fire (*Pl. 62b*). The floor layer below (19-Floor 34) was found at levels 10.16/10.13 to 10.15/10.11. It was a hard-packed floor with few sherds and pebbles, and the soil was reddish-light brown and very hard (*Pl. 62c*). A tiny red layer was found immediately below 19-Floor 34. The pottery from 19-Floor 12 is missing while LM IIIB:1 and LM IIIA with few earlier was noted in 19-Floor 34. 0.640 kg of pottery was collected: 12% decorated, 60% kept and 4.3% inventoried. Shapes counted: 2 conical cups.

Northwest floors

In the northwestern area we had three layers of floors: 1) 19-Floor 9, 1st layer, 2) 19-Floor 9, 2nd layer together with 19-Floor 17 and 3) 19-Floor 9, 3rd layer together with 19-Floor 18 and 19-Floor 13, west part. In the southeastern part the layers of 19-Floor 9 were cut through by the LM IIIB:2 19-Pit H (*GSE III, 97-100*) and the floor(s) were thus preserved to a length of *c.* 3.5 × 2.5. Scattered on the floor were a number of smaller slab stones at levels from 10.12 to 10.06, some of which became covered up by the latest floor phase. The floors were sloping slightly towards south and southeast. In the northwestern part in 1977, a large slab stone was found at *c.* 529/711 below which “there is a hole going 1/2 metre into the scarp”. This hole was not seen during the excavation in 1982.

19-Floor 9, 1st layer, is a thin floor with pumice stone and pebbles set in a dry grey earth. 19-Floor 9, 2nd layer, consisted of a thin layer of hard, light, red soil with pebbles and small pieces of pumice stone and small sherds (*Pl. 62d*). 19-Floor 9, 3rd layer, consisted of a thin layer of brown soil with pebbles

and very few sherds (*Pl. 63a*). 19-Floor 17 consisted of a thin layer of red soil and is situated on the west side of 19-Wall 14 (*Pl. 63b*). 19-Floor 18 on the west side of 19-Wall 14 consisted of a very thin layer of greyish-brown soil with some charcoal. It was excavated at levels 9.99 to 9.98 and below it 19-Pit S was found (cf. below pp. 166-167). 19-Floor 13, the west part, consisted of a thin layer of reddish-brown soil with some pebbles in it. It was excavated at levels 9.98 to 9.93 (*Pl. 62d*). The pottery was LM IIIB:1, LM IIIA and earlier. 3.640 kg of pottery were collected: 9% decorated, 80% kept and 1.9% inventoried. Shapes were not counted.

South floors

In the south part only one layer of floors was found (20-Floor 5 and 20-Floor 9) while there were a few deposits below them, before the floors of 2nd phase were reached. Fragments of 20-Floor 5 were found at most places in the southern part, also west of 19-Wall 9. The floor is reddish with sherds, pebbles and small pieces of flat stones (south); yellow-brown, hard with many stones, pebbles and sherds (west and east); while 20-Floor 9 – only found north of 20-Wall 9 – was reddish-light brown, hard with very few small stones and sherds embedded. The floors contained LM IIIB and LM IIIA sherds. 5.385 kg of pottery were collected: 11% decorated, 76% kept and 2.9% inventoried. Shapes counted: 1 undecorated kylix, 1 undecorated jug, 5 conical cups, 1 tripod cook-

Below floors

Below the floors and above the next layer of floors six small deposits were excavated: 20-Pit F which is situated within the square 529-529.5/704.3-705 at levels 9.98 to 9.87 (and which must have continued both north and west) consisted of a yellow-brown, sandy soil with many small stones and sherds. In the remaining part below the western part of 20-Floor 5 was a layer of light brown-reddish soil with charcoal below which 20-Floor 6 was found. 20-Pit U is situated below 20-Floor 9 in 533-533.7/704-704.4 at levels 10.03 to 9.92 and consisted of a yellow-brown soft soil with many sherds. Below the same floor further west was excavated at levels 9.99 to 9.86 a layer with a dark brown, rather hard soil. And south of 20-Pit U

was excavated another layer at levels 9.99 to 9.94 with a reddish to light brown sandy soil. LM IIIB and LM IIIA with a few earlier sherds were noted. 3.507 kg of pottery were collected: 16% decorated, 85% kept and 3.6% inventoried. Shapes counted: 1 footed cup.

Walls, 3rd phase (*Figs. 62, 68, Pl. 63c-f*)

Two walls seem to have been constructed during this last 3rd phase, 11-Wall 5 and the northern part of 11-Wall 6. 11-Wall 5 (*Pl. 63c-d*) was preserved in its full length of 1.20 between 19-Wall 5 and 11-Wall 6 and had a width of c. 0.5. It was found at levels 10.16 to 9.90/9.81 thus being preserved to a height of

Fig. 68 (opposite). LM IIIB:1 Courtyard, 3rd phase, plan of floors and distribution of finds.

0.3-0.35. On top the stones were very small, while larger ones were found in the course below. Grey-brown clay mortar. Below the wall the LM IIIB:1 11-Pit F2 was found (cf. below p. 176). 11-Wall 6 (*Pl. 63d-f*) could be followed in its entire length of c. 3.2. It consisted of two different parts indicated by a small shift in line around 527.8/711.3. The northern 1.65 was preserved at a width of 0.5 at levels 10.30 to 10.11/10.02 and consisted of rather big stones with small stones in-between. Pinkish clay mortar. The southern 1.55 (*Pl. 64a-b*) was 0.6 in width and it went deeper than the northern part with the bottom at 10.01/9.94. The stones are of various sizes, chiefly limestone bound by a dark reddish-brown clay mortar. The walls contained very little LM IIIB and some LM IIIA with a few earlier pieces. 7.250 kg of pottery were collected: 1% decorated, 60% kept and 0.2% inventoried. Shapes were not counted.

OBSIDIAN

77-OB 121, **Rejuvenation chip** [409] in 11-Wall 5.

Comments: It is not absolutely certain when the aforementioned walls were constructed, but since 11-Wall 5 was constructed upon a pit which must be relatively late in the LM IIIB:1 period we assume that the 3rd phase is the most relevant date. Likewise the northern part of 11-Wall 6 should belong to this period while the southern part, south of 711.3 undoubtedly belongs to an earlier phase, probably 1st phase. The only inventoried sherd came from the cleaning of 11-Wall 5.

2ND PHASE (*Figs. 62, 63a-b, 69; Pl. 64c-67a*)

Also in the 2nd phase the floors consisted of several thin layers which are here – like the preceding phase – kept together. Two constructions, 20-Wall 9 and 19-Wall 11, belonged to this phase.

Southeast floors

In this part the floors were 19-Floor 35 (below which a small pit was found: 19-Pit AA [*Pl. 64e*]) and 19-Floor 36. 19-Floor 35 (*Pl. 64c*) covered all of the excavated area. It was found at levels from 10.15-10.11 to 10.14-10.08 and it consisted of light brown and hard soil with a few sherds and pebbles embedded. Below we found 19-Pit AA and 19-Floor 36. 19-Pit AA (*Pl. 64e*) is situated in a small area around 533.75/707 at levels

10.13 to 9.98 with a loose grey-brown soil at top and with ash and charcoal further down. 19-Floor 36 (*Pl. 64d*) excavated at levels 10.14-10.08 to 10.11-10.05 was another beaten earth floor, hard and of light brown colour. Apparently only LM IIIA:2/B:1 and little earlier pottery. 3.215 kg of pottery were collected: 15% decorated, 85% kept and 2.6% inventoried. Shapes counted: 1 footed cup and 1 cooking dish rim.

Northwest floors

In this part the Courtyard consisted of the floors 19-Floor 21-23. Above 19-Floor 21 we found a hard brown soil with pebbles and some charcoal while in the corner of 19-Walls 11 and 9 the soil was dark red, rather hard. 19-Floor 21 (*Pl. 65a*) was hard, reddish-brown with charcoal and some pebbles in it, and like all the other floors sloping towards the southeast. The floor still had many slab stones in the central part. Above 19-Floor 22 (*Pl. 65b*) a hard light brown soil was found, while the floor itself consisted of light grey earth with some pebbles, small pieces of charcoal and it still had some slab stones in the central and eastern part. A single complete conical cup was found on the floor (*Fig. 69A, Pl. 65c*). 19-Floor 23 (*Pl. 65d*), now with less slab stones embedded, consisted of a hard greyish-brown soil with a lot of charcoal and some pebbles and with a concentration of ash around 531.2/708.5. LM IIIB:1 with LM IIIA and earlier pottery were noted. 9.625

South floors

In this part there was also a single layer of floors excavated at levels from c. 10.00 down to c. 9.89 in some areas with tiny deposits below: 20-Floor 10, 20-Floor 6 (*Pl. 66c, d*), 20-Floor 23, 19-Floor 15, 12-Floor 5, east part. 20-Floor 10 found north of 19-Wall 9 was a hard-packed earth floor, very hard, brown to red brown with no sherds nor pebbles embedded. Below 20-Floor 10 was a 0.07-8 thick layer of red-brown, a little sandy not very hard soil with charcoal. 20-Floor 6/19-Floor 15/12-Floor, 5 east (*Pl. 66a-d*), covering most of the area south of 19-Wall 9 consisted of a hard-packed, light brown soil with few sherds and small stones embedded. 20-Floor 23 (*Pl. 67a*) situated below 20-Pit AG (cf. above p. 152) of which two fragments were preserved in the east part, was a hard-packed earth floor, light brown with a few bigger and smaller stones embedded, pieces of lime and very few sherds.

The pottery contained LM IIIA sherds with few earlier pieces and some pieces of LM IIIB. In the very southern part below 20-Floor 6 two small deposits were excavated of which one was reddish, little hard and with many larger stones while the other was greenish-brown not very hard and with many stones – these two may perhaps be part of the Rubbish Area Southeast. 9.740 kg of pottery were collected: 9% decorated, 77% kept and 3.0% inventoried. Shapes counted (1984): 1 undecorated kylix, 7 conical cups, 1 tripod cooking pot leg, 1 decorated and 2 undecorated goblets, 1 flask, 1 footed cups, 1 cooking dish rim and 1 ladle.

Comments: The most spectacular find from the floors of the 2nd phase is the roundel **KH Wc 2117** found on 19-Floor 22. Although found on the floor the roundel is obviously out of context, as several other Linear A documents were also found. With the seal impression and inscription found on many other roundels from the LM IB period, it seems most likely that **KH Wc 2117** should also belong to this period, while the conical cup 82-P 1684 might perhaps have been in use contemporary with the floor. The small intrusive sherd probably derives from the Roman Ditch (*Pl. 66c*) which had not been cleaned up well enough.

Walls, 2nd phase (*Fig. 69, Pls. 61c, 66d, 67b-c, 68a*)

20-Wall 9 was constructed directly upon the floors of the 1st phase of the Courtyard. The wall fragment is situated within the square 532-533.6/703-704 running roughly east-west. It could be followed to a length of 1.7 and had a width of 0.6-0.65. In 533 the wall was discontinued in a width of 0.2 m. It was preserved at levels 10.22/10.06 to 9.97. The wall was built of comparatively small stones and much mud mortar. The technique involved seemed to be: first one layer of stones which were almost covered with mortar and then the next row of stones were laid and so on. Three courses of stones are preserved, set in a dark brown to grey-brown, rather loose mortar. The pottery was mainly LM IIIA with some earlier. 2.090 kg of pottery were collected: 4% decorated, 55% kept and 2.0% inventoried. No shapes to be counted.

of 1.4 and with a width of 0.55-0.60. The wall was built of unworked stones of different sizes while smaller stones were noted at the bottom. It was built up against 19-Wall 9 and it was overlying the lower part of 19-Wall 14. It was excavated at levels from 10.40 to 9.80/9.9.73. LM IIIA and LM IIIB and a few earlier pieces noted in the pottery 1.260 kg of pottery was collected: 5% decorated, 90% kept and 4.5% inventoried. No shapes to be counted.

1ST PHASE (*Figs. 62, 63a-b, 70, Pls. 68b-71a*)

Also the 1st phase consisted of thin floor layers in all three areas. Two walls were constructed in this phase: 19-Wall 9, south part and 11-Wall 6, south part.

Southeast floors

The SE floors consisted of two layers: 19-Floor 37 and 19-Floor 38 excavated at levels 10.11 to 10.01. Both 19-Floor 37 (*Pl. 68b*) and 19-Floor 38 (*Pl. 68c*) were hard, light brown with pieces of charcoal and lime. In the preliminary dating the pottery was LM IIIA and few earlier. One doubtful LM IIIB sherd was also noted. 2.010 kg of pottery were collected: 7% decorated, 72% kept and 6.3% inventoried. Shapes counted: 2 conical cups.

Comments: A soil sample of 19-Floor 38 was collected.

Northwest floors

The NW floors consisted of 19-Floor 24 and 19-Floor 25 and a small pit 19-Pit T which was stratified below 19-Floor 24 but cut into 19-Floor 25. The pit, 19-Pit S, is probably of the same period. It was discovered below the floor outside the Courtyard (19-Floor 18).

19-Floor 24 (*Pl. 69a-b*) consisted of rather hard, light red-brown soil with a lot of charcoal. Only a few small slab stones in the central part. 19-Floor 25 (*Pl. 69c-d*) consisted of a layer of dark brown clay with some bright red clay in it. Very few slab stones – one large around 530/710. 19-Pit T (*Pl. 69c-d*) was found below 19-Floor 24, northeast of 19-Wall 14. It was c. 0.40 wide and with a length of almost 2.00. It was discovered at levels 10.04/9.94 to 9.80/9.63. The soil was dark brown and rather loose with a lot of pebbles and some charcoal. The pit may possibly be a foundation pit for 19-Wall 14? 19-Pit S (*Pl. 69d*) is situated within the square 528.3-529.6/707.4-708.55. 19-Floor 18 of the 3rd phase was partly laid upon the pit up against 19-Wall 14. The pit started at level 10.05 and the bottom was reached at 9.80. The pit had cut into the LM IB destruction level of House I, Room M. It consisted of a reddish-brown loose/soft soil with a lot of pebbles and some charcoal bits.

In the preliminary dating the pottery for all deposits appeared LM IIIA with few earlier and one possible LM IIIB sherd. 18.370 kg of pottery were collected: 10% decorated, 74% kept and 1.5% inventoried. Shapes were not counted.

South floors

The south floors consisted of 19-Floor 16, 12-Floor 6, 20-Floor 14, 20-Floor 11 and 20-Floor 12.

19-Floor 16/12-Floor 6 (*Pl. 70a*) is described as a thin floor made of yellowish clay containing pebbles, very small stones and pieces of charcoal. 20-Floor 14 (*Pls. 70b, 71a*), stratified above 20-Floor 11 was discovered in the area below and north of later 20-Wall 9 and it was hard-packed, yellow-brown with a few small stones and sherds embedded. 20-Floor 11 (*Pls. 70c, 71a*) was found in most of the south area, the only exception being south of the later 20-Wall 9 and where we found 20-Pit Z. The floor was brown, rather hard with many pebbles and sherds embedded. 20-Floor 12 (*Pl. 70d*) was found in most of the southern area and the western area of the south part. It was light brown, hard and with many small stones and sherds embedded. 20-Pit Z (*Pl. 71a*) was found below 20-Floor 14 and went down to the floor of the LM IIIA:2 period. It was a 0.25 wide ditch situated within 532.3-533.5/703.7-704.1 and it consisted of a brown, little greyish and slightly hard soil with stones.

The pottery appeared to be LM IIIA and earlier with a few LM IIIB:1 sherds. 17.735 kg of pottery were collected: 8% decorated, 76% kept and 2.4% inventoried. Shapes counted: 7 conical cups, 2 tripod cooking pot legs, 10 undecorated goblets and 2 footed cups.

Walls, 1st phase

19-Wall 9, south part (*Pl. 61c, 66d*) was seen to be constructed on top of 20-Floor 12. It had a width of 0.6 and 1.1 was taken out. The construction of the wall did not differ from the remaining part (described below p. 241). It was excavated at levels from 10.17/10.00 to 9.89/9.73. The pottery was mainly LM IIIA with a few earlier, one or two doubtful LM IIIB sherds. 0.747 kg of pottery was collected: 22% decorated, 94% kept and 7.5% inventoried. No shapes to be counted. The southern part of 11-Wall 6 (*Pl. 64a, b*) also belonged to

this phase, which, however, was excavated together with the northern part of the wall in 3rd phase (cf. above p. 161).
