

THE LATE MINOAN IIIA:2 SETTLEMENT

STRATIGRAPHY AND CATALOGUES

RUBBISH AREA NORTH

As in the LM IIIB:1 period several pits and deposits which were not directly related to the buildings were excavated in the northern part of the excavation.

PITS

11-Pit G (*Fig. 88, Pls. 25a:8-9, 89b*)

In the very north corner of LM IB House I, Room E within 525.4-527/714.2-715.6, a pit was dug into the LM IB destruction level – partly exposing one of the pithoi in the underlying storeroom. The pit was stratified partly below the neighbouring LM IIIB:1 pit 11-Pit F2 (cf. above, p. 176) and partly below the LM IIIB:1 upper deposit between Buildings 1 and 2 (cf. above p. 170). The soil consisted of a relatively loose, brown-yellowish soil and was excavated at levels 10.02 to 9.75/9.61. The pit contained LM IIIA pottery with some earlier – mainly LM I – pieces. 29.720 kg of pottery were collected: 10% decorated, 93% kept and 1.6% inventoried. Shapes counted (1976): 1 large stirrup jar, 2 undecorated kylikes, 5 tripod cooking pot legs, 1 tripod storage jar leg and 1 footed cup.

POTTERY

76-P 0014, *Pls. 131, 204f:3*

Stirrup jar, miniature, base/body frg. Clay: LW. High raised base. Ext. three lower body bands, broad base band and a thin band above. Base Ø 0.023. Th. 0.003-4. LM IIIA:2.

77-P 0696, outside j.

77-P 0697, *Pls. 131, 204f:6*

Alabastron, straight-sided, upper body frg. Clay: LW. Sloping shoulder with scar from a horiz., high-slung handle and straight-sided body. Ext. neck band, a semicircle and three dots on shoulder, band around handle section, a broad band on upper body and festoons with hatched triangles. Max. body Ø est. 0.15. Th. 0.003. Burnt. SMALL FINDS

76-M 001, *Pls. 229, 261a:2* [740]
Bronze tweezers?, frg. Two smaller fitting pieces, very corroded. Of a flat shape with flaring ends. Total L 0.028. Th. 0.003.
77-TC 100 (former 77-P 1105), *Pls. 231, 261a:3* [741]
Clay stopper, sealing type, Partly pres. Clay: very light brown, burnt dark grey on top. Relatively finely gritted with some white inclusions and sand grains. The stopper has sealed a vase with an oval (Diam: 0.042 × 0.033) and broken spout – perhaps from a larger jug. Possible imprints from strings or the like on one of the fractures. The fractures on this piece are very heavy, indicating that the lump has very probably been placed around the rim – although not at the back where the lump is complete (perhaps because it was here the handle was). No seal impressions. Pres. H 0.04. Ø 0.038-0.049. Further measurements: H above rim impression: c. 0.013. LM IB?
76-FR 004a, *Pl. 261a:4* [742]
Unpainted plaster, seven frags. Medium hard, almost pure plaster. Flat or irregular surface. Mpd. 0.045. Th. 0.013-16. LM I.
76-FR 004b, *Pl. 261a:4* [742]
Unpainted plaster, one corner frg. Medium hard, almost pure plaster. Flat surface. Mpd 0.046. Th. 0.023. LM I.
76-FR 005a, *Pl. 261a:5* [743]
Unpainted plaster, six frags. Medium hard, almost pure plaster. Flat surface. Mpd 0.045. Th. 0.012-17. LM I.

76-MISC 009, *Pl. 260e* (see below, Shells) [744]
76-MISC 013, *Pl. 261a:1* [745]
Gaming marker?, completely pres. Clay: whitish (LW?), very fine without any grits. One side is flat and smoothed, other side is curved and more crudly worked. L 0.020. W 0.016. H 0.008.
76-S 007 [746], outside j.
77-S 038 [747]
Stone. Coarse, black with lighter white particles and particles of mica. Of a rounded shape, flattened on each side. Ø 0.080.
77-S 062, *Pl. 261c* [748]
Stone object, temporarily misplaced.

BONES

Few bones from adult *Sus* and from young *Ovis/Capra*.

SHELLS

1 *Pinna* – four frags.: 0.097 × 0.023, 0.052 × 0.33, 0.038 × 0.33, 0.0245 × 0.019 (76-MISC 009).

Comments: The stopper and the plaster fragments probably come from the LM IB destruction level and the stone vase fragment 76-S 007 fits another piece in LM IB. 7 sherds join vases in LM IB Rooms E and D. Sherds to two LM IIIA:2 vessels were, however, excavated with the LM I layers which proves that the pit was not cleaned well enough. The two sherds (77-P 1336 and 77-P 1340) have been kept here. For the joins to Space H, below 9-Floor 2, see above, p. 214.

Dump (*Fig. 88, Pls. 19a:15 bottom and 16 middle, 25b:12-15, 17, 25c:11, 90a*)

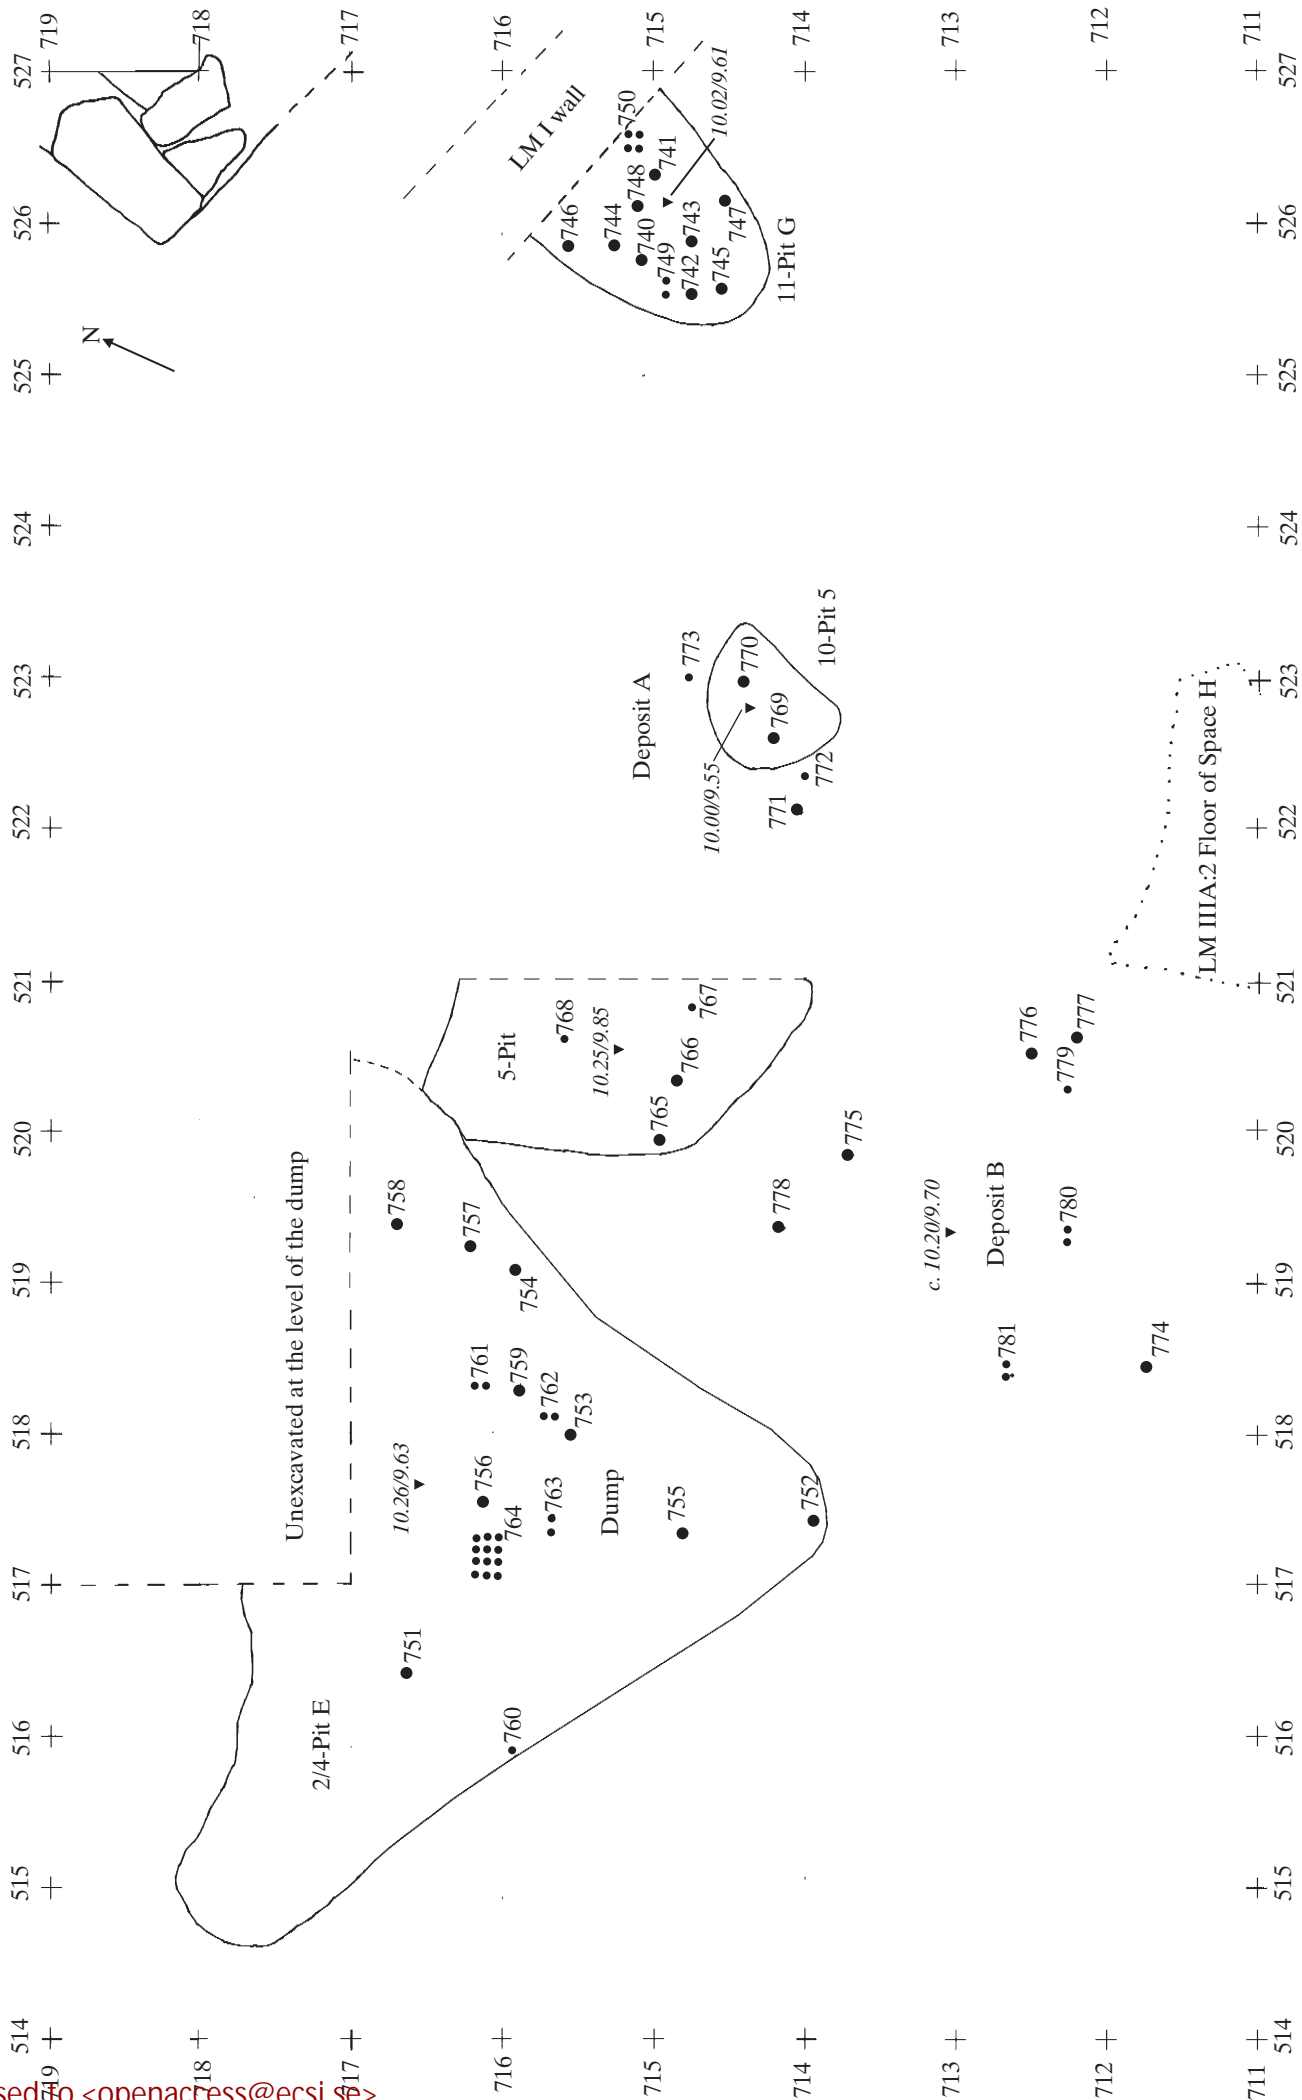

Stratified below LM IIIB:1 “Area 3, north of Room H” (cf. p. 190) some rubbish had been dumped on top of a large LM IIIA:1 pit, but the dump stretched further than the lower pit (as also seen in the Rubbish Area Southeast) from roughly 514.5-520.3/713.9-718. Its eastern part was disrupted by the Venetian Cistern (*GSE I*, 150-151, fig. 29). It was excavated at levels from c. 10.26 to c. 9.81/9.63. It consisted of a soft red-brownish to yellow earth with charcoal and spots of black brown earth. In the area north of 717 (2/4-Pit E) the dump was resting directly upon the Middle Minoan layers. The soil was brown, loose with several stones, some charcoal, bones and shells. Towards the bottom of the dump the soil is harder. The content of the dump appeared to be mainly LM IIIA with also a few earlier pieces. 15.065 kg of pottery were collected (2001): 15% decorated, 100% kept and 1.3% inventoried. Shapes noted (1970 & 1971): decorated cups, kylikes, stirrup jars, kraters, pyxis, undecorated cups, kylikes, goblets, footed cups, amphorae and a pithos rim. Shapes counted (2001): 1 decorated jug, 6 small and 4 large undecorated goblets, 1 undecorated bowl, 1 footed cup (early type), 1 ladle, 1 pithos rim, 6 tripod legs and 5 conical cups.

BONES

From adult *Ovis* and *Bos*, and from adult and young *Ovis/Capra* and *Sus*.

Comments: The part north of 717 contained – considering the size – surprisingly little pottery (01-inventory numbers) and notably no small finds.

5-Pit (*Fig. 88, Pl. 20c:13 bottom*)

East of the dump there was a large pit situated within the squares 520-521/713.8-716.6. The pit continued east, but was not identified during the excavation of scarp 5/10. Towards the north it was disrupted by the Venetian Cistern. The pit was dug into the LM II/IIIA:1 reused LM IB Room G and was covered by the LM IIIB:1 deposits north of Room H. It was excavated at levels *c.* 10.21 to *c.* 9.85 and had dark soft soil with stones. LM IIIA pottery with few earlier pieces noted in all the baskets. Nothing was weighed. Shapes noted (1971): decorated cups, decorated and undecorated kylikes, large stirrup jar, amphorae, krater, rhyton, undecorated goblets, undecorated jugs, undecorated cups and bowls and conical cups.

10-Pit 5 (*Fig. 88, Pl. 90b*)

Another pit, partly cut by the Venetian Pit 7 (cf. *GSE I*, 157-158), was stratified between the LM IIIB:1 deposit 2 and 10-Pit 4 (cf. above p. 197) and a small LM IIIA:2 deposit called A (cf. below, p. 249) within the square 522.4-523.4/714-714.6. The pit was excavated at levels c. 10.00 to 9.55 and contained a soft yellowish-brown soil. It was cut into the LM IB destruction level. The pottery was mainly LM IIIA with few earlier pieces. Nothing was weighed. Counted shapes: 1 undecorated kylix, 8 conical cups, 2 legs of tripod cooking pots, 1 undecorated goblet, 5 legs from tripod storage jars and 4 footed cups.

SMALL FINDS

73-TC 055 (Mus.no. II 1566), *Pls. 230, 262c:1* [769]

Clay stopper, solid type. Almost complete, only broken off at top and along edge. Clay: dull brown-red, in places burnt black, porous, some small white inclusions and few sand corns. Where broken at top and from string holes along the edge, the stopper is seems to have been wound at least 5-6 times. The cord is not a twisted one, but rather bast or the like, the fibres of the bast are only faintly visible not at all like on for example 77-TC 099 (p. 52) or 77-TC 112. The stopper has sealed a vase with a regular, complete spout c. 0.035 in diameter. The rim of the spout is slightly flaring, which might have facilitated the binding of strings. (c. 0.018 is going down into the spout). Rather flat on the top. On the part above the rim there are only tiny fractures meaning that not very much clay was going over the rim proper. The surface of the part which went into the spout is very smooth, indicating that a piece of leather may have been placed here. The string has probably been wound into the clay. There are remains of seven impressions, none of which are completely preserved. At least two different seals (A and B) were used to seal the stopper. Characteristic is that the seal impressions have been very carefully placed along the edge whereby only small parts are preserved. Of the two impressions on the top one (5) is very lightly impressed and the other only partly preserved. Pres. H 0.028. \emptyset 0.036.

A (imprints 4, 5, 6 and 7?): three or four incomplete impressions of a lentoid. \emptyset c. 0.013. Motif: three, or probably originally four quadrupeds (lions?) running clockwise on the periphery. The hind legs have clear paws. The heads are not preserved. Below the front

legs of the completely preserved animal a short stroke. LM I? Publ.: *CMS V Suppl. 1A*, no. 147. For similar arrangement of several quadrupeds cf. *CMS*, VII nos. 107, 112; II8, no. 530.

B (imprints 1, 2 and probably 3): three incomplete impressions of a lentoid. \emptyset c. 0.0125-0.013. Lower SH clearly preserved in impression. Motif: the front part and three legs of a standing quadruped in right profile. In front of it a human figure (female, dressed with a skirt?) in left profile. The upper part of the body is rather summarily rendered without indication of arms. Both below the belly of the quadruped and behind the human figure one dot. Publ.: *CMS V Suppl. 1A*, no. 148; Hallager & Hallager 2007, 143 and Tabel 1. LM I? 73-S 026, *Pls. 228, 262c:2*, Γκ/522-523 [770]

Stone vase, rim frg. of large lamp. Probably low, non-pedestalled type. Black peridotite, mottled with dark grey patches (inclusions of a mineral with high magnesium content; probably magnesite). Part of stepped moulding on rim. Flat rim with horiz. grooves. Carinated profile. Plain, undecorated ext. Rather cracked and chipped. H 0.06. Rim \emptyset est. 0.308. Th. 0.055-34. Analysed. MM III-LM I? Survival. Warren 1969, type 24, II A 9. Marks of burning as evidence for function?

Comments: The clay stopper is interesting. It fits very well into 77-P 0849 (Mus.no. 4462) a decorated stirrup jar of medium size found in the undisturbed part of LM I, House I, Room E (see forthcoming Vol. VI). This identification is possible, but not absolutely certain.

DEPOSITS

Deposit A (*Fig. 88, Pl. 22c:7*)

10-Pit 5 was dug into a layer of yellowish-brown hard soil mixed with small stones and charcoal. It was found below LM IIIB:1, Deposit 1 west of Building 2 and above the LM IB destruction level and covered a larger area than 10-Pit 5. The deposit contained LM I, MM and LM IIIA pottery. Nothing was weighed. Shapes counted: 8 conical cups and 2 footed cups.
